April 23, 2010

A New Resource for Straight Talk about Fibrowatt

INTRODUCING WWW.THESTRAIGHTPOOP.ORG

Fibrowatt has launched a new web site – www.TheStraightPoop.org – to provide straight answers to real questions about how we create renewable energy from poultry litter and the impact of our plants on the local community and the environment.

As Fibrowatt expands its U.S. operations, we are currently working to build renewable energy plants in large poultry-producing states such as North Carolina. Since these plants use poultry litter as a primary fuel source, they tend to generate a lot of attention and plenty of questions.

This site is a resource to get accurate answers to those questions in a timely manner. It will feature blog posts that provide news updates and address common questions about our technology, emissions and other issues. Recent posts have discussed the agricultural benefits of providing a sustainable nutrient management solution, shared emissions data from the Fibrominn plant in Minnesota, and provided an update on recent decisions by the NC Public Utilities Commission that will require utilities to generate power from poultry litter.

If you have a question about Fibrowatt, [click here](#) and send it to us. We will routinely answer questions to ensure you get “the straight poop” about Fibrowatt.
